Road Maintenance and Pothole Repair SOP

Sahyadripur Municipal Corporation

1. Scope

This procedure covers repair of potholes, damaged carriageways, footpaths and speed breakers on roads maintained by the corporation, including the Ring Road.

2. Repair timelines

Potholes reported on arterial roads and the Ring Road must be repaired within 5 days (the roads SLA is 120 hours). Potholes causing an accident or near a school or hospital are repaired within 48 hours. In the monsoon, temporary cold-mix patching is used and permanent repair follows within 15 days of the rains stopping.

3. Quality and resurfacing

Every road is scheduled for resurfacing on a five-year cycle. Roads with three or more repeat pothole complaints within 90 days must be moved up in the resurfacing schedule. Contractors provide a 3-year defect liability period. Utility companies must restore any road surface they dig up within 7 days.

4. Monitoring

Ward engineers inspect at least 20 percent of completed repairs each month. Complaint clusters along the same road segment are reviewed monthly by the Roads and Maintenance Department. A sudden rise in pothole complaints in any ward is treated as an early warning for resurfacing demand.
